

Nobilitas For Africa

A strategy to develop Africa through the economic concept of "Industrialization for Happiness"

Project Abstract

The investors

As Futuro Italia, a no profit Italian organization together with Mr. Antonbarbaro Pascarella's Intelligo Think Tank, creator of the political and economic theory named "Governing for people's happiness", we have planned a new way to help lower industrialized countries with a poor GDP, to reach better conditions of life of their populations.

We believe that there are two gender of great or medium investors around the world: Rapacious Investors and Low Risk Investors. Rapacious have the tendency to give a small value to a country and collect back all what they can in a really unbalanced exchange; a good example is China, who's investors, public or private ones, are normally willing to deplete the natural resources in exchange of a very low local investment, if compared with what they will pick.

Low Risk Investors are normally those kind of people (i.e. wealthy people, investment funds) which minimal earning target is the well known 20% R.O.I. with the lower possible risk. They will never invest in Africa except of they can have stable governments, high natural resources potential, social and religious stability; anyway they will think in their profit as first.

We are quite sure that nobody will accept to invest even a low amount of money in a poor GDP country without the said tendencies.

We have decided that our view, of a different way to invest in Africa, is the best solution for the future in an ethic and, I would like to say, noble approach.

The Nobilitas Project For Africa

Our operating partners have already realized a No Fungible Token named Nobilitas and on it we have created the Nobilitas for Africa Project; our goal is to create industrial structures and factories in Africa to help the local populations to have a job and a salary to increase the national GDP and the life conditions. The said "Governing for People's Happiness" (GPH concept).

The first issued amount of Nobilitas tokens, is about 900 million units and it has a standard face value of 1 (one) USD. Other emissions will follows as and when necessary.

The contract between the issuer company and the purchaser is that, (apart the future value of the token itself on the exchange markets) 95% of the raised funds will be invested in industries creation in Africa's countries and the owners of each single token will get one proportional part of the 30% of the industrial net profit after local taxes. Another 30% of the net profit will be used to capitalize the newly created local companies and industries. 40% of the net profit will be asked to be sent to the international holding which will own all created companies per each single assisted country.

We will ask the local governments to participate to the 30% of the holding; we will also ask governments to exonerate the created companies to pay the income taxes, to let us build all along the years, with those funds, unproductive structures inside the country (i.e. roads, hospitals, schools) following government's priorities.

What we ask to governments

Official government support on international media to our Nobilitas placement on the market.

Priority in management and licensing of prospection and extraction of natural resources; economic net results, after investments repayment, will be shared at 50% to local governments.

Priority in management and licensing of great infrastructure projects as government's official general contractors, which net profit will be claimed by the before said local holding.

Creation under our request of special economic free zones to increase investment attraction.

Priority to create a national stable crypto currency, under governments supervision, based on a collateral representing the total natural assets of the country.

Quick and reliable asked informations

Protection and Translators for our representatives while in the country.

Government Advantages

Availability of funds at no interest rate and no refund

Development of the national industrial and economic system

Development of local infrastructures

Correct use of local natural resources

Increasing the national GDP

Population happiness
